

CST 226-2 Web Application Development

Lesson 01: Introduction to Server-side Scripting

Activity 01: Getting Ready to use PHP

Pre-requirements: Web server (i.e., Apache) need to be up and running on your working environment

Tasks:

- Write a PHP program to print “Hello World...!!!” as output.
- Write a PHP program to print “Today is you 25th birthday...!!!” as output. The value 25 need to pass as a variable value.

Write a PHP script that performs the following operations on two integers (10 and 5). The script should output the result of each operation in a clear and readable format.

- Addition
- Subtraction
- Multiplication
- Division
- Modulus
- Write a PHP program that prints the numbers from 1 to 100, but for multiples of three print "Fizz" instead of the number, and for multiples of five print "Buzz". For numbers which are multiples of both three and five print "FizzBuzz".
